Stephen:

My comments are as follows:

1. The completions that are listed for Tank 12 are not accurate as these repairs were temporary repairs for a specific purpose so I do not think that you can claim them as completions. You can add an additional task and call it complete but the fact is that after completing the processing of the water you will need to remove whatever sludge has accumulated in that tank, remove the tank bottom, remediate any soils under the tank, and then do a 653 inspection and repair if you plan on keeping that tank as a soil storage tank.

2. For all tanks listed except for the butane tank you should have the following task:

"Remove contaminated soils from the soils underneath the tank should inspection reveal any deterioration or failure of the tank bottom allowing any materials to leak to those soils..."

3. Finally, I am not seeing much progress based upon what is shown as having been completed from the task list. I am not getting a good feeling about how things are going.

Thanks
